CodeTech Software Solutions

Company information / Approved founder and service facts

Custom software. Business systems. Connected workflows.

FOUNDER & DIRECTOR

Stephen Ochieng is the Founder & Director of CodeTech Software Solutions.

Practical software around real work

CodeTech Software Solutions provides custom software development, business systems, integration and support. The starting point is the work to be done: who uses the system, which records matter and what a successful result looks like.

Service areas

Area	Conversation focus
Custom software	Clarify the workflow, users, inputs, decisions and intended outcomes.
Business systems	Explore suitable records, roles, operational controls and reporting.
Integration	Identify the external service, account owner, API requirements and verification steps.
Support	Understand the issue, evidence, environment and practical next action.

Make the scope clear

Delivery conversation / From brief to evaluation

1

Describe the work

Use the project brief to explain the current process, people involved, pain points and desired result.

2

Choose a useful workflow

Identify the essential records and the action that moves work forward. Treat a demonstration as evidence for that workflow, not a promise that every advanced requirement is already complete.

3

Evaluate with your own criteria

Review role permissions, calculations, reporting meaning, integrations and deployment requirements. Record observed evidence in the software evaluation checklist.

4

Agree the next step

Confirm scope, responsibilities, support arrangements and acceptance criteria in an approved project record. Commercial terms are agreed separately.

FACTUAL PUBLIC INFORMATION

This profile does not invent client names, project results, qualifications, office addresses, prices, partnerships or company registration claims.

Prepare a useful enquiry

- Describe the business process and the people who will use the software.
- List the records, approvals and reports that are essential to the first usable workflow.
- Identify any existing systems and external services that may need integration.
- Note delivery constraints and the evidence you will use to evaluate the result.
