Fleet & logistics

Operations / Core workflow guide

Coordinate vehicles, drivers and trips.

BUILD STATUS

Development preview 0.1.0. These diagrams describe the shipped core records and state actions. They are not interface screenshots. Full UI walkthrough and live Hostinger acceptance are pending.

The record sequence

1	**Vehicles**	Create this reference data first.
2	**Drivers**	Create this reference data first.
3	**Trips**	References: vehicles, drivers

Follow the workflow

Create a vehicle and driver, dispatch a trip without conflicting active assignments and complete it.

BEFORE YOU BEGIN

Sign in, select your workspace and open this system. Create referenced records first. Use fictional data for testing and protect any personal or confidential information.

Know your records

Data reference / Inputs and computed values

Vehicles

Field	Input type	How to use it
Name	text	Plain text, up to 200 characters.
Registration	text	Plain text, up to 200 characters.
Capacity	quantity	Non-negative; at most three decimals. Transaction quantities must exceed zero.

Drivers

Field	Input type	How to use it
Name	text	Plain text, up to 200 characters.
Phone	text	Plain text, up to 200 characters.
Licence reference	text	Plain text, up to 200 characters.

Know your records

Data reference / Continued

Trips

Field	Input type	How to use it
Vehicle id	ref	Select a workspace record from vehicles.
Driver id	ref	Select a workspace record from drivers.
Origin	text	Plain text, up to 200 characters.
Destination	text	Plain text, up to 200 characters.
Starts at	datetime	Date and time; end must follow start where paired.
Ends at	datetime	Date and time; end must follow start where paired.
Distance km	quantity	Non-negative; at most three decimals. Transaction quantities must exceed zero.

Every record also has a workspace identifier, state, version and timestamps. Reference selection and server checks prevent a record from linking to another workspace.

Operate with confidence

Actions, permissions and safe recovery

Available state actions

Record	States	Actions
Vehicles	active	Reference data; no state action.
Drivers	active	Reference data; no state action.
Trips	planned > dispatched > completed > cancelled	dispatch to dispatched, complete to completed, cancel to cancelled

Dispatch assignments

- Dispatch checks overlaps for both the selected vehicle and driver against dispatched trips.
- Trip end time must follow its start time. Capacity and distance are recorded values.
- GPS tracking, live routing, telematics and automatic driver notifications are not included in this core flow.

Roles and subscription access

Owners, managers and staff can create records while the subscription is active. Viewers can read. Approval, verification, publishing, payroll settlement and journal posting require an owner or manager. Entitlements and record quotas are enforced on the server. Expired subscriptions become read only.

Documents and recovery

- Use the record PDF action for a private document. CSV export requires an eligible plan. Attachments accept PDF/JPG/PNG up to 5 MB per file; demos cannot upload.
- A stale version or repeated action is rejected. Refresh, inspect the saved state and retry only when appropriate. Processed records cannot be edited as drafts.
- A PDF is a snapshot of recorded information. Ordinary business records do not receive the CEO signature, stamp or company seal automatically.
